Choosing an LG TV: C4, C5, G5 and B4

Compare documented LG model features and buying tradeoffs without unverified prices or performance rankings.

LG · TVs · 2026-04-09 · Updated 2026-11-14

Offline edition. Check your model and follow its manufacturer instructions. Open the current online guide.

The useful LG TV comparison starts with your room, size and total installed cost. This guide covers specific documented models from earlier lineups. It is not a claim that these are the newest TVs available, nor a ranking based on laboratory measurements.

A previous model can be worth considering when its actual offer is attractive. That requires checking today's stock, warranty, condition and price. We do not quote clearance prices or assume an older model is always cheaper.

C4 and C5: compare the exact size

LG's Canadian specification pages identify the **OLED65C4PUA** as a 65-inch 4K OLED with an alpha 9 Gen7 processor, and the **OLED65C5PUA** as a 65-inch 4K OLED with an alpha 9 Gen8 processor. The C5 page lists a 120Hz native panel and VRR up to 144Hz. See C4 specifications and C5 specifications.

Those descriptions establish model features; they do not establish how much better one looks in your room. This article does not claim the C4 and C5 perform identically, or that a processor generation alone justifies a particular premium.

For these two models, get quotations for the same screen size and include delivery and installation. Ask what is included with an open-box or display unit and check return terms. If gaming is important, verify the relevant inputs and supported signal formats on the exact regional model before ordering.

G5: check the installation package

The US **OLED65G5WUA** listing explicitly describes a supplied wall mount. That is a concrete reason to investigate this variant if you want a wall installation. It is not a reason to assume every G5 size or retailer package includes identical accessories. Consult LG's exact model listing.

Compare the cost of installation, cable management and any separately needed stand. Do not buy on a general promise that all G5 panels use the same construction or that the G5 must be the best picture for every household. We have not measured this model against the alternatives.

B4: a separate quotation, not an automatic bargain

LG identifies the **OLED65B4AUA** as a 65-inch B4 OLED and lists Dolby Vision and Dolby Atmos among its features. The official B4 listing is a better starting point than a retailer description copied across several variants.

Treat it as another candidate at your chosen size. Compare the features that affect your use and the actual offer. An entry in a lower product series does not establish today's selling price, warranty coverage or how much performance you would personally give up.

What about the non-OLED option?

The non-OLED entry in this article's catalog is a shopping lead. Its family name alone is insufficient for a technical recommendation: obtain the full model number, year, size and regional specifications before comparing it with these OLED examples. We have not established a current winner in that category here.

Make the final choice in your room

Check reflections from your normal seat, especially if a window faces the screen. Ask to see ordinary TV material as well as promotional footage. Confirm dimensions, furniture clearance and sound-system connections before paying.

Our practical preference is to choose the least expensive exact model that meets those requirements with acceptable return terms. That is a buying approach, not an assertion that a particular LG series wins independent performance testing.

What we checked, and where

Specs, port numbers and settings paths on this page were checked against these sources. Manufacturer documentation first, professional reviews second.

• LG documents the identities and scoped features of OLED65C4PUA, OLED65C5PUA, OLED65G5WUA and OLED65B4AUA; no measured performance equivalence or current value ranking is asserted. lg.com
